Automotive Composites

The make-or-break decade for carbon and natural fibres

Fibre-based composites are becoming increasingly important in the manufacture of automotive components. These new materials look set to continue their penetration of the automotive sector, and their large-scale use in mass-production cars, trucks and other vehicles is being widely predicted.

Automotive Composites: The make-or-break decade for carbon and natural fibres reviews the use of composites in the automotive sector and assesses how far these materials are from being used in mass vehicle production.

Written by Adrian Wilson, this in-depth report, with around 250 pages and more than 50 tables, provides a sustainable roadmap for the automotive composites industry for the next decade and beyond.

It includes detailed analyses of the production and markets for carbon fibres, glass fibres and natural fibres, and profiles of leading suppliers of these input materials.

Automotive Composites: The make-or-break decade for carbon and natural fibres

The global composites industry – around 90% of which is currently glass fibre-based – is now worth an estimated €80bn, and over the past five years, automotive and transportation has grown to become its biggest sector by tonnage.

Composite materials have been widely used for non-structural car parts since the 1950s. In recent decades, automotive interiors have been increasingly produced from thermoplastics, with semi-structural parts now widely made from thermoset composites.

In the aircraft, boat building and racing/sports car sectors, the use of carbon fibre composites has grown rapidly in recent years. In the aerospace industry, for example, carbon fibre-based composite parts in the aircraft body now account for more than 50% of the total weight of the latest models, such as the Airbus A380 and Boeing 787 Dreamliner.

In general, composite materials are lighter in weight than steel or aluminium, which provides engineers with a lightweight alternative for use in a wide range of automotive structures and components. High strength and lighter weight leading to better fuel efficiency are the key benefits that composites offer the automotive sector; greater design flexibility, enhanced aesthetics and improved durability are other advantages.

But there are several reasons why advanced composites have not been more widely adopted by the automotive industry. The key stumbling block is price, while the availability and future supply of carbon fibres is another issue that is being addressed by fibre producers.

Many companies, from carbon fibre suppliers through to original equipment manufacturers (OEMs), are now entering the market, with a wave of partnerships and joint ventures announced over recent months. Meanwhile, there are ongoing attempts to replace glass fibre with natural fibres, such as flax and hemp.

The burning question preoccupying the automotive industry is just how far carbon can succeed in replacing today’s metal structures.

Company profiles

The report features profiles of leading suppliers and users of carbon, glass and natural fibres, including:

- Lamborghini
- McLaren
- BMW
- Toray Industries
- Toho Tenax
- Mitsubishi
- SGL
- Hexcel
- Zoltek
- Owens Corning
- Johns Manville
- PPG Industries
- AGY
- Ecotechnilin
- Borgers
- AFT Plasturgie.

Five easy ways to order today...

1. Online: www.textilemedia.com
2. E-mail: info@textilemedia.com
3. Fax: +44 8700 940868
4. Telephone: +44 1603 308158
5. Post: Textile Media Services Ltd, Homerton House, 74 Cabston Road, Reepham, Norfolk NR10 4LT, UK

☐ Please send me ____ copy(ies) of Automotive Composites: The make-or-break decade for carbon and natural fibres in print format. Publication price £495 GBP (including airmail delivery)

☐ Please send me ____ copy(ies) of Automotive Composites: The make-or-break decade for carbon and natural fibres in PDF format (single user licence). Publication price £495 GBP* (including email delivery)

*All UK customers and non-VAT registered EU customers must add £79 GBP to the total, which represents 20% VAT for a PDF. Please contact us for prices of multi-user and site licences, and for purchasing a print+PDF package.

Payment options

☐ I enclose a cheque payable to Textile Media Services Ltd.
☐ Please invoice me (report will be despatched on receipt of payment).

Company order number:

☐ Please charge my MasterCard/VISA

Card number ____________________________

Three-digit security number _______ (last three digits on signature strip on back of card)

Expiry date ____________________________

Cardholder name ____________________________

Cardholder address (if different from left) ____________________________________________

Signature ____________________________ Date ____________________________

☐ I wish to pay by bank transfer in pounds sterling or euros (or another convertible currency).

Textile Media Services will send you details of our bank accounts in these currencies. (Report will be sent by airmail and/or e-mail on receipt of payment. Please allow up to 14 days for airmail delivery.)
